Management data

Concerning the 117th fiscal year settlement

■ **Business Progress and Result**

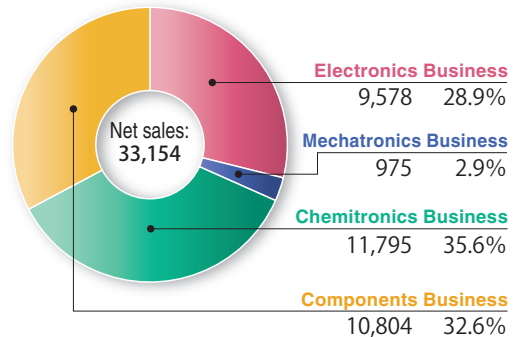

During the fiscal term ended in March 2018, Japan's economy has been gently recovering due to continuous improvements of both employment and income situations and the uptrends of the indices of industrial production, especially among general, industrial, and commercial machinery industries.

Capital investments are gradually and consistently increased and, thereby, the increase rate of the capital investment compared to the previous year is expected to exceed from the previous year as results of the strong corporate results and the world economic recovery. Although, in China, the capital investment decreases among heavy industries due to excess production capacity and strict environmental regulation, the export increases for the first time in three years and leads the economic growth as expansions of the global economies; thereby, GDP rate is turned +6.9% through the year, exceeding +6.7% in the previous year for the first time in seven years. However, uncertainties of future economics still remains due mainly to unclear economic policies in the U.S. government, increases of geopolitical risks, and concerns in the trading conflict between U.S. and China.

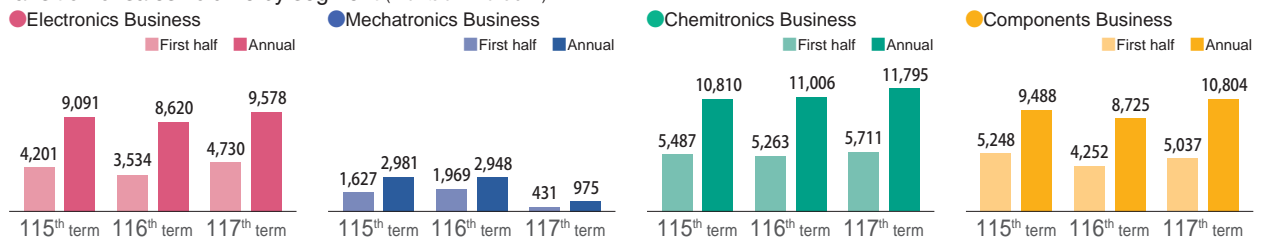

In the above-mentioned business environment, our net sales turned 33,154 million yen (5.9% more than that of the previous fiscal year). With regard to the profit, the sales profit is 1,822 million Yen (95.9% more than that of the previous fiscal year), the ordinary profit is 1,908 million Yen (61.7% more than that of the previous fiscal year). By posting impairment loss of 264 million Yen in Mechatronics business, the net profit attributable to owners of parents turned 868 million Yen (Net loss attributable to owners of parents was 1,376 million Yen in the previous fiscal year).
